Q1.Login Form (20 Marks – Complete UI)

1 activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="20dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Username" />

    <EditText
        android:id="@+id/username"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="Enter Username" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Password"
        android:layout_marginTop="10dp" />

    <EditText
        android:id="@+id/password"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
```

```
        android:hint="Enter Password"
        android:inputType="textPassword" />

    <Button
        android:id="@+id/loginBtn"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:text="Login"
        android:layout_marginTop="15dp"/>

</LinearLayout>
```

2️⃣ MainActivity.java

```
package com.example.myapp; // keep your package name

import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    EditText username, password;
    Button loginBtn;
```

```
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);

        username = findViewById(R.id.username);
        password = findViewById(R.id.password);
        loginBtn = findViewById(R.id.loginBtn);

        loginBtn.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {

                String user = username.getText().toString();
                String pass = password.getText().toString();

                if(user.equals("") || pass.equals("")) {
                    Toast.makeText(MainActivity.this, "Enter all fields", Toast.LENGTH_SHORT).show();
                } else {
                    Toast.makeText(MainActivity.this, "Login Successful", Toast.LENGTH_SHORT).show();
                }
            }
        });
    }
}
```

Q2.Send Message Using Explicit Intent

1 activity_main.xml (First Screen)

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="20dp">

    <EditText
        android:id="@+id/editMessage"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="Enter Message" />

    <Button
        android:id="@+id/sendBtn"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:text="Send"
        android:layout_marginTop="10dp"/>

</LinearLayout>
```

---

2 MainActivity.java

```
package com.example.myapp; // keep your package name

import android.content.Intent;
```

```
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    EditText editMessage;
    Button sendBtn;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);

        editMessage = findViewById(R.id.editMessage);
        sendBtn = findViewById(R.id.sendBtn);

        sendBtn.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {

                String msg = editMessage.getText().toString();

                Intent intent = new Intent(MainActivity.this, SecondActivity.class);
                intent.putExtra("message", msg);

                startActivity(intent);
            }
```

```
        });
    }
}
```

---

3 activity_second.xml (Second Screen)

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical">

    <TextView
        android:id="@+id/textViewMessage"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Message will appear here"
        android:textSize="18sp"/>

</LinearLayout>
```

---

4 SecondActivity.java

```
package com.example.myapp; // same package

import android.content.Intent;
import android.os.Bundle;
import android.widget.TextView;
import androidx.appcompat.app.AppCompatActivity;

public class SecondActivity extends AppCompatActivity {

    TextView textViewMessage;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_second);

        textViewMessage = findViewById(R.id.textViewMessage);

        Intent intent = getIntent();
        String msg = intent.getStringExtra("message");

        if(msg != null) {
            textViewMessage.setText(msg);
        }
    }
}
```

⚠️ IMPORTANT (Don’t forget in exam)

Add this inside AndroidManifest.xml:

```
<activity android:name=".SecondActivity"></activity>
```

Q3.Activity Lifecycle Demo

1️⃣ activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Activity Lifecycle Demo"
        android:textSize="20sp"/>

</LinearLayout>
```

2️⃣ MainActivity.java

```
package com.example.myapp; // keep your package name

import android.os.Bundle;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        Toast.makeText(this, "onCreate", Toast.LENGTH_SHORT).show();
    }

    @Override
    protected void onStart() {
        super.onStart();
        Toast.makeText(this, "onStart", Toast.LENGTH_SHORT).show();
    }

    @Override
    protected void onResume() {
        super.onResume();
        Toast.makeText(this, "onResume", Toast.LENGTH_SHORT).show();
    }

    @Override
    protected void onPause() {
```

```
        super.onPause();
        Toast.makeText(this, "onPause", Toast.LENGTH_SHORT).show();
    }

    @Override
    protected void onStop() {
        super.onStop();
        Toast.makeText(this, "onStop", Toast.LENGTH_SHORT).show();
    }

    @Override
    protected void onRestart() {
        super.onRestart();
        Toast.makeText(this, "onRestart", Toast.LENGTH_SHORT).show();
    }

    @Override
    protected void onDestroy() {
        super.onDestroy();
        Toast.makeText(this, "onDestroy", Toast.LENGTH_SHORT).show();
    }
}
```

✅ What happens:

App start → onCreate → onStart → onResume

Minimize → onPause → onStop

Come back → onRestart → onStart → onResume

Close app → onDestroy

✅ Perfect for practical:

Covers all lifecycle methods ✓

Output visible ✓

Very easy ✓

Send next question 🔥

Q4.

Got it 👍 — here is simple 20-mark practical (ImageView + TextView + Button)

✓ Easy code

✓ No crash

✓ Button click changes text

✅ ImageView, TextView, Button Demo

1️⃣ activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:gravity="center"
    android:padding="20dp">

    <ImageView
        android:id="@+id/imageView"
        android:layout_width="150dp"
        android:layout_height="150dp"
        android:src="@mipmap/ic_launcher" />

    <TextView
        android:id="@+id/textView"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello User"
        android:textSize="18sp"
        android:layout_marginTop="10dp"/>
```

```
    <Button
        android:id="@+id/button"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Click Me"
        android:layout_marginTop="10dp"/>

</LinearLayout>
```

2️⃣ MainActivity.java

```
package com.example.myapp; // keep your package name

import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.TextView;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    TextView textView;
    Button button;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
```

```
        setContentView(R.layout.activity_main);

        textView = findViewById(R.id.textView);
        button = findViewById(R.id.button);

        button.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                textView.setText("Button Clicked!");
            }
        });
    }
}
```

⚠️ Important

Image is taken from:

@mipmap/ic_launcher

✓ Already available → no extra file needed

✅ This covers:

ImageView ✓

TextView ✓

Button ✓

Click event ✓

Send next question 🚀

Q5.

Got it 👍 — here is simple 20-mark practical (Audio using Service)

✓ Plays audio in background

✓ Simple Service (no advanced code)

✓ No crash

✅ Play Audio using Service

⚠️ Step 1: Add audio file

Put your audio file (e.g., song.mp3) in:

res → raw → song.mp3

(If raw folder not there → create it)

---

1 activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:gravity="center">

    <Button
        android:id="@+id/startBtn"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Start Music"/>

    <Button
        android:id="@+id/stopBtn"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Stop Music"
        android:layout_marginTop="10dp"/>

</LinearLayout>
```

2️⃣ MainActivity.java

```
package com.example.myapp; // keep your package name

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    Button startBtn, stopBtn;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);

        startBtn = findViewById(R.id.startBtn);
        stopBtn = findViewById(R.id.stopBtn);

        startBtn.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
```

```
            Intent intent = new Intent(MainActivity.this, MyService.class);
            startService(intent);
        }
    });

    stopBtn.setOnClickListener(new View.OnClickListener() {
        @Override
        public void onClick(View v) {

            Intent intent = new Intent(MainActivity.this, MyService.class);
            stopService(intent);
        }
    });
  }
}
```

---

3 MyService.java

```
package com.example.myapp; // same package

import android.app.Service;
import android.content.Intent;
import android.media.MediaPlayer;
import android.os.IBinder;

public class MyService extends Service {

  MediaPlayer player;
```

```
@Override
public void onCreate() {
    super.onCreate();

    player = MediaPlayer.create(this, R.raw.song);
    player.setLooping(true);
}

@Override
public int onStartCommand(Intent intent, int flags, int startId) {

    if(player != null) {
        player.start();
    }

    return START_STICKY;
}

@Override
public void onDestroy() {
    super.onDestroy();

    if(player != null) {
        player.stop();
        player.release();
    }
}

@Override
public IBinder onBind(Intent intent) {
```

```
        return null;
    }
}
```

⚠️ IMPORTANT (Don’t forget)

Add in AndroidManifest.xml

```
<service android:name=".MyService"/>
```

✅ This covers:

Service ✓

Background audio ✓

Start/Stop ✓

Safe code ✓

🔥 Tip for exam:

File name must be song.mp3

Use R.raw.song exactly

Q16

Got it 👆 — here is simple 20-mark BMI Calculator app

✅ Easy logic

✅ No crash

✅ Button click + result display

✅ BMI Calculator App

1️⃣ activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="20dp">

    <EditText
        android:id="@+id/weight"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="Enter Weight (kg)"
        android:inputType="numberDecimal"/>

    <EditText
        android:id="@+id/height"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="Enter Height (meters)"
        android:inputType="numberDecimal"
        android:layout_marginTop="10dp"/>

    <Button
        android:id="@+id/calcBtn"
        android:layout_width="match_parent"
```

```
        android:layout_height="wrap_content"
        android:text="Calculate BMI"
        android:layout_marginTop="10dp"/>

    <TextView
        android:id="@+id/result"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Result"
        android:textSize="18sp"
        android:layout_marginTop="15dp"/>

</LinearLayout>
```

---

2 MainActivity.java

```
package com.example.myapp; // keep your package name

import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import android.widget.TextView;
```

```
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    EditText weight, height;
    Button calcBtn;
    TextView result;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);

        weight = findViewById(R.id.weight);
        height = findViewById(R.id.height);
        calcBtn = findViewById(R.id.calcBtn);
        result = findViewById(R.id.result);

        calcBtn.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {

                String w = weight.getText().toString();
                String h = height.getText().toString();
```

```
            if(w.equals("") || h.equals("")) {
                Toast.makeText(MainActivity.this, "Enter all values",
Toast.LENGTH_SHORT).show();
            } else {
                float weightVal = Float.parseFloat(w);
                float heightVal = Float.parseFloat(h);

                float bmi = weightVal / (heightVal * heightVal);

                result.setText("BMI: " + bmi);
            }
        }
    });
  }
}
```

⚠️ **Important (exam tips)**

Enter height in meters (e.g., 1.75)

Avoid empty input → already handled ✓

No division by zero issue (user enters value) ✓

✅ Covers:

Input ✓

Calculation ✓

Output ✓

Button click ✓

Send next question 🚀

            @Override
            public void onClick(View v) {

                Intent intent = new Intent(MainActivity.this, MyService.class);
                stopService(intent);
            }
        });
    }
}
```

---

3 MyService.java

```
package com.example.myapp; // same package

import android.app.Service;
import android.content.Intent;
import android.media.MediaPlayer;
import android.os.IBinder;

public class MyService extends Service {

    MediaPlayer player;

    @Override
    public void onCreate() {
        super.onCreate();

        player = MediaPlayer.create(this, R.raw.song);
        player.setLooping(true);
    }

    @Override
    public int onStartCommand(Intent intent, int flags, int startId) {
```

```
        if(player != null) {
            player.start();
        }

        return START_STICKY;
    }

    @Override
    public void onDestroy() {
        super.onDestroy();

        if(player != null) {
            player.stop();
            player.release();
        }
    }

    @Override
    public IBinder onBind(Intent intent) {
        return null;
    }
}
```

⚠️ **IMPORTANT**

Add in AndroidManifest.xml

<service android:name=".MyService"/>

✅ Final Checklist (exam)

song.mp3 in res/raw ✓

Service created ✓

Manifest updated ✓

Buttons working ✓

💯 This is perfect full Service answer

10

Got it 👆 — here is simple 20-mark Resources app (String, Color, Image, Dimension)

✓ Uses all resources

✓ Clean + safe code

✓ Easy for exam

✅ Android Resources Demo

1️⃣ strings.xml

📂 res → values → strings.xml

```
<resources>
    <string name="app_name">MyApp</string>
    <string name="hello_text">Hello User</string>
    <string name="button_text">Click Me</string>
</resources>
```

---

2 colors.xml

📂 res → values → colors.xml

```
<resources>
   <color name="myColor">#6200EE</color>
</resources>
```

---

3 dimens.xml

📂 res → values → dimens.xml (create if not present)

```
<resources>
   <dimen name="text_size">20sp</dimen>
   <dimen name="padding">20dp</dimen>
</resources>
```

⚠️ 4 Image

Use default image:

@mipmap/ic_launcher

✓ No need to add file

---

5 activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:gravity="center"
    android:padding="@dimen/padding"
    android:background="@color/myColor">

    <TextView
        android:id="@+id/textView"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
```

```
        android:text="@string/hello_text"
        android:textSize="@dimen/text_size"
        android:textColor="#FFFFFF"/>

    <ImageView
        android:layout_width="150dp"
        android:layout_height="150dp"
        android:src="@mipmap/ic_launcher"
        android:layout_marginTop="10dp"/>

    <Button
        android:id="@+id/button"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="@string/button_text"
        android:layout_marginTop="10dp"/>

</LinearLayout>
```

---

6 MainActivity.java

```
package com.example.myapp; // keep your package name
```

```
import android.os.Bundle;
import android.widget.Button;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    Button button;

    @Override
    protected void onCreate(Bundle savedInstanceState) {

9

Got it 👆 — this question needs practical + short steps (not theory-heavy)

✅ 1️⃣ Hello World Application

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
   xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:gravity="center">

   <TextView
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:text="Hello World"
      android:textSize="24sp"/>

</LinearLayout>
```

MainActivity.java

```
package com.example.myapp; // keep your package name
```

```
import android.os.Bundle;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);
    }
}
```

✅ 2️⃣ Android Studio Interface (write short points in exam)

Toolbar → Run, Debug, AVD options

Project Panel → Shows files (java, res, manifest)

Code Editor → Where you write Java/XML

Layout Editor → Design UI (drag & drop)

Logcat → Shows output and errors

Bottom Panel → Build, Run, Emulator

✅ 3️⃣ Steps to Create AVD (Android Virtual Device)

1. Open Android Studio

2. Click Device Manager (AVD Manager)

3. Click Create Device

4. Select device (e.g., Pixel)

5. Choose system image (API version)

6. Click Finish

7. Click ▶ to start emulator

✅ Final Exam Flow

Write Hello World code ✓

Write interface points ✓

Write AVD steps ✓

💯 Perfect 20-mark answer (balanced practical + steps)

Send next question 🚀

8

Got it 👆 — here is simple 20-mark ListView app (5 items)

✓ Easy

✓ No crash

✓ Uses ArrayAdapter

✅ ListView (5 Items)

1️⃣ activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent">

    <ListView
```

```
    android:id="@+id/listView"
    android:layout_width="match_parent"
    android:layout_height="match_parent"/>

</LinearLayout>
```

---

2 MainActivity.java

```
package com.example.myapp; // keep your package name

import android.os.Bundle;
import android.widget.ArrayAdapter;
import android.widget.ListView;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

  ListView listView;

  @Override
  protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
```

```
        setContentView(R.layout.activity_main);

        listView = findViewById(R.id.listView);

        String[] items = {
            "Maths",
            "Science",
            "English",
            "Computer",
            "History"
        };

        ArrayAdapter<String> adapter = new ArrayAdapter<>(
            this,
            android.R.layout.simple_list_item_1,
            items
        );

        listView.setAdapter(adapter);
    }
}
```

🔁 **If you want GridView (alternative)**

XML change

```
<GridView
   android:id="@+id/gridView"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:numColumns="2"/>
```

Java change

```
GridView gridView = findViewById(R.id.gridView);
gridView.setAdapter(adapter);
```

✅ Covers:

ListView ✓

5 items ✓

Adapter ✓

💯 **Perfect exam answer**

                    Toast.makeText(MainActivity.this, "Enter all fields",
Toast.LENGTH_SHORT).show();
                } else {
                    Toast.makeText(MainActivity.this, "Login Successful",
Toast.LENGTH_SHORT).show();
                }
            }
        });
    }
}
```

✅ **Covers:**

OnClickListener ✓

Button click ✓

Toast message ✓

Basic validation ✓

Got it 👆 — here is simple 20-mark AppBar + UI Components app

✓ AppBar (Toolbar)

✓ Button + TextView + EditText

✓ No crash

✅ AppBar + UI Components App

1️⃣ activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical">

    <!-- AppBar / Toolbar -->
    <androidx.appcompat.widget.Toolbar
        android:id="@+id/toolbar"
        android:layout_width="match_parent"
```

```
    android:layout_height="wrap_content"
    android:background="#6200EE"
    android:title="My App"
    android:titleTextColor="#FFFFFF"/>

<!-- UI Components -->
<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="20dp">

    <EditText
        android:id="@+id/editText"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="Enter Name"/>

    <Button
        android:id="@+id/button"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:text="Submit"
        android:layout_marginTop="10dp"/>

    <TextView
```

```
        android:id="@+id/textView"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Result"
        android:textSize="18sp"
        android:layout_marginTop="15dp"/>

    </LinearLayout>

</LinearLayout>
```

---

2 MainActivity.java

```
package com.example.myapp; // keep your package name

import android.os.Bundle;
import android.widget.Button;
import android.widget.EditText;
import android.widget.TextView;
import androidx.appcompat.app.AppCompatActivity;
import androidx.appcompat.widget.Toolbar;

public class MainActivity extends AppCompatActivity {
```

```
    Toolbar toolbar;
    EditText editText;
    Button button;
    TextView textView;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);

        toolbar = findViewById(R.id.toolbar);
        setSupportActionBar(toolbar);

        editText = findViewById(R.id.editText);
        button = findViewById(R.id.button);
        textView = findViewById(R.id.textView);

        button.setOnClickListener(v -> {
            String name = editText.getText().toString();
            textView.setText("Hello " + name);
        });
    }
}
```

⚠️ **Important**

Toolbar acts as AppBar ✓

setSupportActionBar(toolbar) is required ✓

✅ **Covers:**

AppBar ✓

EditText ✓

Button ✓

TextView ✓

💯 Perfect 20-mark answer

Questions:

Android Programming Practicals

1. Design a login form that accepts a username and password using TextView and EditText.

2. Create a simple application to send a message from one activity to another using an explicit Intent.

3. Demonstrate the Activity Lifecycle with proper methods (onCreate, onStart, onResume, etc.).

4. Create an Android application using Android Studio that demonstrates the use of ImageView, TextView, and Button components.

5. Create an Android application that plays an audio file in the background using a Service

6. Design an application using AppBar and UI Components (Buttons, TextView, EditText).

7. Implement OnClickListener on the Login button and display a message using Toast

8. Display a ListView / GridView and show at least 5 items (e.g., Subjects or Apps)

9. Design a Hello World Android Application and explain the interface of Android Studio. Also demonstrate creation of an Android Virtual Device (AVD).

10. Create an application to demonstrate Android Resources (String, Color, Image, Dimension) in UI components.

11. Design an application using Linear Layout and Relative Layout with proper UI components.

12. Create an Android application demonstrating Menus (Options Menu / Context Menu).

13. Develop a simple calculator app that performs:

- **Addition, Subtraction, Multiplication, Division**

Requirements:

- **EditText (Inputs)**
- **Buttons (Operations)**
- **TextView (Result)**

14. Develop an application using Services (e.g., play music in the background).

15. Develop an app that shows:

- **Alert Dialog on button click**
- **Confirmation message (Yes/No)**

16. Create an Android application using Android Studio to calculate the Body Mass Index (BMI) of a user.
